

Civil engineering involves the planning, designing and maintenance of construction, structures and infrastructures. The professionals within this sector play an important role in everybody's lives; from improving the buildings we live and work in, the power and water systems we use daily, and the transport networks and roads we rely on.

We deliver specialists in the conception, planning, design, analysis, construction, calculation, manufacture and solution development. We operate across a range of sectors including; construction, management, structural, transport, water, architecture and geotechnical.

We understand the knowledge and expertise needed for these projects to be a success and withstand the test of time. This is why we qualify and vet our candidates in detail to ensure we are only representing the best talent in the market. In addition to experience and relevant qualifications such as Maths, IT, mechanics, and physics, we consider the softer skills required including:

- **Problem solving**
- **Methodical and strategic thinking**
- **Attention to detail**
- **Time management**
- **Communication**
- **Up-to-date relevant legislation understanding**
- **Adaptable to change**

**The range of civil engineering projects and specialist skills is expansive. Whether Consultant or Contractor, we can provide office or on-site professionals to manage, design and construct all types of civil engineering projects.**
