

# CYBER SECURITY

As a population we have become heavily dependent on digital devices to work, shop, communicate, travel, store data and much more. Unfortunately, this reliance delivers constant opportunities for cyber criminals. Public and private organisations that are improving and streamlining business services and procedures are being targeted by malicious actors.

## Our Areas of Expertise:

Application Security  
DevSecOps  
Penetration testing  
Enterprise Security  
Cloud Security  
Identity and Access Management (IAM)  
Network Security  
Security Operations Centre (SOC) / Cyber Security Operations Centre (CSOC)  
Leadership (CISO, VP Security, Head of Information Security)  
Cyber Compliance  
SIEM

From detection management, threats and vulnerability to identity and access management, and infrastructure, our dedicated cybersecurity consultants are experts within various niche cyber marketplaces, helping clients connect cyber security talent.

**We boast an unmatched candidate pool of experts in planning, implementing, updating, monitoring and maintaining the required security measures – cloud and server level.**

We research candidates' experience in detail including; access control, infrastructure support, security design, intrusion detection, threat analysis, security policy enforcement and level of expertise on the key systems in the market including; cisco, juniper, F5, Splunk and Checkpoint

We have a team of experienced experts in this field who can question and reference check candidate's skills and experience. This ensures candidates have the knowledge, ability and willingness to constantly develop, to successfully protect business IT systems, networks and data.
