Analytics  
Kafka/AWS  
Hbase  
Horton Works

We live and work in the digital age. Data has become more important than ever when it comes to mapping the future for all industries.

Businesses need robust strategies to capture, manage and analyse data in-order to succeed. We have worked with a wide range of clients from tourism to construction to finance (and everything in between!) to bolster their data and business intelligence functions.

Whether your business is ready to migrate to the cloud or your team needs better insights and in-depth reports, our diverse talent pool has worked with businesses of all sizes, at different levels of development.

We understand that strong and accurate business intelligence supports organisation decision making, raises awareness of KPIs, alerts problems, demonstrates potential improvements, gauges the overall health of an organisation and ultimately, shapes business growth, investment and development. It is therefore crucial businesses have experts gathering this data.

**Our in-house experts stay up to date with the latest developments, trends and advancements in the data and BI market to ensure we source the best possible talent.**

We dive deep into a candidates CV, uncovering relevant projects and experience whilst questioning around the programmes they've used, be it tableau, cognos, hadoop or Hbase, to really decipher their level of expertise and uncover if they are qualified to take on the task at hand.
