Animators

Design professionals are responsible for the overall look and feel of software development products, with a strong focus on user experience and user interface design.

We recruit design professionals across a range of industries.

Design candidates are responsible for the final appearance. This is vital to ensure products are user-friendly, modern and ultimately, do what is required. 3D artists/designers specialise in programming and image design, prepare geometry data and define parameters, perspectives and light or shadow contrasts.

Professionals within the design space revolutionse products and companies. They need to have a strong eye for detail; enjoy working in agile environments; be innovative when it comes to design; capable of working with stakeholders of all levels; and have the confidence to make critical decisions which will significantly impact the long term user experience.

The market is growing and advancing at speed. There has been an abundance of new technologies introduced including; AR, VR, cloud interfaces and 3D models, to name but a few. Designers need to be up-to-date with the latest technology developments to ensure new products are at the forefront of the industry.

Our expert consultants are immersed in the market, allowing them to qualify candidates thoroughly, gaining a detailed understanding of a candidate's skills, experience, ambition to learn and level of seniority.

We also uncover programme literacy such as Sketch, Framer, Invision, Illustrator, Photoshop, Unreal Engine and 3dsMAX.

Our database of design candidates have a diverse range of backgrounds inducing AR, Game design, 3D graphic design, 4D after effects, web design, iconography design and cloud interface experience.

Whatever the position, we meet every unique recruitment requirement.
